EDUCATION

Ege University | Computer Engineering

2015 - 2017

- C language and the logic of algorithm

Kocaeli University | Architecture

2017 - 2021

- Foundation of architecture, drawing plans, 3D modelling, construction.

EXPERIENCE

Archi's Academy | Remote

2023 - 2024

Travel Booking Website

- During our time at the academy, we participated in three group projects. In the first project, we worked on an online holiday organization site using HTML, CSS, and JavaScript. Throughout the project, we learned how to convert designs from Figma into code.
- We created the structure with HTML, customized the design with SCSS, made the site dynamic by using various elements, and made the site functional with JavaScript. Additionally, we successfully integrated our website for different screen sizes.

E-Commerce Website

- Our second project consisted of six people and was focused on an e-commerce site. We learned about React technology and related hooks, states, prop passing, and lifecycle methods. By connecting pages separately through components, we fully utilized React's benefits and successfully completed the project within the given time frame.

Food Order Website

- In the third project, consisting of six people, I completed the project from scratch on my own in about two months, less than the anticipated time. During this process, I improved my React skills and utilized nested structures with Sass. I also enhanced my clean coding abilities and gained advanced experience in site deployment and construction.

Project Management Platform / Ofisim

- This is my side project that I am currently working on. I published a video on LinkedIn about how it works and what kind of functionality it has. It is a project management platform specifically for construction companies that I have previously worked with.
- I am developing a system that helps organize workflows and assists employees in managing their projects in a coordinated manner. The project uses React.js, Firebase, and Strapi.

Radius Tech Fashion Services Ltd.

2024

Technologies: Next.js, Tanstack Query, shadcn, TypeScript, Tailwind CSS

Wargame: UI Design & Frontend Development

- Utilized the Next.js App Router to structure and manage dynamic routes efficiently within the application.
- Designed and implemented intuitive user interfaces, focusing on responsive and mobile-first design principles.
- Used Tailwind CSS for efficient styling and layout, ensuring consistency across components.
- Leveraged TypeScript to ensure type safety and maintainability of the codebase.
- Applied Tanstack Query for efficient state management and server-side data fetching.

Placemaking AI: Bug Fixing & Feature Development

- Worked on identifying and fixing bugs to enhance the overall functionality and user experience.
- Improved the reliability and performance of the project by debugging issues across the codebase.
- Integrated new features into existing applications, ensuring seamless functionality with the existing structure.
- Collaborated with the development team to ensure feature implementation aligned with the project roadmap.
